"EVERYBODY'S FLOWER"

(See front cover page)

WHY? Because so universally suited to planting almost anywhere, and for almost every purpose. **"King of the Flowers."** Because it combines more qualities of majestic beauty, gorgeous colors and easy culture than any other flower you can get. For big dividends in beauty and fragrance, even if your soil is poor and your summers hot, we recommend an investment in this **"Aristocrat"** of the Flower Family" **the Hardy Herbaceous Peony—Everybody's Flower.**

Read what *The Garden Magazine* says:

WHY GROW PEONIES?

There are at least seven good reasons for the popularity of the herbaceous peony:

1. It is easy to grow; anybody can raise glorious peonies with less trouble than it takes to grow good roses.
2. A peony well established is as permanent a feature in the garden as is desirable in a herbaceous plant.
3. Peonies are perfectly hardy wherever apples can be grown, passing through the most severe winters without injury.
4. The blooms are large, showy, of various forms, and in any shade of color from white to purple.
5. Almost all varieties are fragrant.
6. It is practically free from disease and insects. No spraying or dusting or hand picking of worms is necessary.
7. It is equally successful as a cut flower and for artistic landscape effects.—*Garden Magazine.*

How, Where and When to Plant.

The Peony will grow well on almost any well drained fertile soil, but it does it's best on a rather heavy moist loam.

Make the ground rich, for the Peony is what gardeners term a "gross feeder." The roots also like plenty of water. Plant in the Autumn, 2 to 3 feet apart, with the crowns 2 to 3 inches below the surface, and press soil well about the roots.

A clump well established will last from 20 to 40 years. But it pays to take them up, divide the roots and replant them every 7 or 8 years.

Oblong beds—3 rows wide, make grand displays—but better still, plant generously along your porch or walk, or in front of shrubbery border.—*Garden Magazine.*

Flowers All Winter and Spring

Flower lovers know the joy and satisfaction to be found in growing flowers from Bulbs—the demand for them is increasing annually. No other flowers grow so easily or are so sure to bloom. One can have a wealth of fragrance and beauty all through the dull days of Winter. Do you realize it—reader? And better still, their time of bloom can be regulated. Can you imagine any more delightful gift for the holidays or Christmas time than a box of Bulbs in bloom?

It is easily managed. Note the following simple directions.

For Growing Indoors Use good garden soil or with a little (say $\frac{1}{4}$) admixture of sand. The best soil is composed of rotted sods, rotted manure and sand. If manure is not available use "Bonora," the plant food offered on circular in this book.

Use bulb pans, pots or boxes, and provide for drainage; then fill with soil to within two inches of the top, and place the bulbs, spacing them as indicated in schedule below. For indoors it is not too close if they nearly touch each other. Then cover with soil and see that it is thoroughly firmed down. Allow room at the top for watering, which do at once, and set bulbs away in a cool dark place (say cellar, cold frame or pit) and cover box or pot and all with damp sand or ashes. This is to develop strong root growth.

Keep them there until within 3 or 4 weeks of the time you want them to flower, then bring them gradually to the light and heat. Do not allow the soil to become dry at any time.

For the Garden Dutch Hyacinths, Tulips, Crocuses, Narcissus, Japan Lilies, Iris, Snow Drops, etc. (see pages below), are the best flowers for early Spring bloom, and beautiful they are, but they must be planted in the Autumn. The sooner in October the better, or any time till the ground freezes. Plant in well-manured, good garden soil at depth and arranged as indicated in the schedule below. The bulbs are quite hardy, but will be the better for a good covering of leaves, litter or manure before hard freezing. This should be removed in the Spring when growth starts and before the weather gets warm.

The Best Bulbs for Indoor Winter Flowering

may be grouped in order of bloom about as follows: Roman Hyacinths, Paper White Narcissus, Oxalis and Sacred Lily. A little later come the White Callas, Freesias, Jonquills and Duc Von Thol Tulips. Then throughout midwinter and into Spring come the stately Dutch Hyacinths, the nodding Tulips, Narcissus and the lesser bulbs.

After Blooming bulbs may be left where they are to bloom the next season (Pansies or Forget-me-nots from seeds sown in the same bed the Fall before will come on after the bulbs are done and make a fine second crop of beauty); or, if the bed is wanted for other flowers allow bulbs to mature, lift and dry them, and store away as you would onions, till wanted again in the Fall.

Hyacinths and Tulips are not likely to bloom so well the second season.

Bulbs for Naturalizing are becoming much more popular of recent years. Narcissus, Crocus and Daffodils, Snow Drops, Grape Hyacinths and Chionodoxas do splendidly when planted in the turf or sod; avoid straight rows. Try scattering them about and plant them where they fall. Use a dibble and fill the bottom of the inverted, cone-shaped hole thus made with sand, but plant bulbs at usual depths. These should then continue blooming season after season till by increase they become too crowded, and will need to be reset. Thus in time you can have regular little colonies of flowers (see illustration on page 22).

HOW TO GROW HYACINTHS

In the Open Ground

They should be planted in the Fall 6 inches apart each way and 3 to 4 inches deep. Give them slight protection over Winter and they will flash forth in beautiful bright colors early in the Spring and remain in bloom some weeks. Then the Bulbs may be removed in time to set your Summer flowering plants. Or in some soils, Bulbs do well a number of years without lifting or replanting. So that in the same bed one may sow or set out shallow rooting plants such as Petunias, Verbenas and Portulacas which will produce a second season of bloom and in no way hurt the Bulbs.

In Pots or Window Boxes

Hyacinths potted in September may be brought to bloom by Christmas, and by successive plantings a succession of bloom may be had until Easter. Plant the Bulb in the pot so that its crown just shows, then when finished set away in a cool dark place for 6 weeks or 2 months for root growth to develop. After this bring gradually to the light, heat, and air, and give plenty of water, and you will be well repaid.

In Glasses

All Hyacinths succeed well in water. If Hyacinth glasses are not available use pebbles or shells to keep the Bulbs in place and then set the Bulb so that the lower end is almost but not quite in contact with the water. It is not essential to change the water; a small lump of charcoal in the bottom will serve the same purpose. Put away in a cool dark place till you see the roots developed, then remove by degrees to full light and air.

Specially Selected for Choice House Culture and Bedding

Of all the Winter and Spring Flowering Bulbs the Hyacinth is King. You can get them in nearly any color you wish: pink, red, yellow, orange and blue, from pure white and delicate tints to deep dyed purple; all very fragrant. They are of the easiest culture and sure to bloom because each bulb has the blossom already started and wrapped tight inside it when you get it. They will grow almost anywhere you plant them—indoors in soil or water, and will give gorgeous bouquets for Christmas week or other occasions. They remain in bloom a long time, and for table, window or mantel decoration or conservatory display they are exquisite. Equally as valuable, too, for outdoor culture.

The figures 1, 2, 3 and 4 after the name of the Hyacinth indicate the relative time of flowering—the 1's flower together and are the earliest; No. 4 the latest.

Narcissus or Daffodils

The Narcissus or Daffodils are among the earliest to bloom and most brilliant and showy of all our Spring flowers. They are entirely hardy and highly valued for beds and borders in yard and garden, and also for Winter blooming in the house. When potted, they flower very quickly and will soon fill your window garden with beauty and fragrance. For the flower beds set 3 or 4 inches deep and 4 to 6 inches apart, according to the size of the bulb. They bloom beautifully very early in the Spring; the flowers are very rich and handsome and delightfully sweet. They are very different in form and color, but all exceedingly beautiful.

TRUMPET NARCISSUS

Glory of Leiden—(See Illustration.) You have doubtless heard of the famous old city of Leiden in Belgium, where it is believed this glorious Daffodil originated, and is still cultivated in great perfection. It is a magnificent new sort, with immense flowers of great substance and beauty; large, long, fluted trumpets; deep, rich, golden yellow, and borne on broad sturdy stems with thick leathery foliage; a healthy vigorous grower and early and profuse bloomer; being new and scarce the price is necessarily high.

Clear rich golden yellow, with immense fluted trumpet, and petals so large as to overlap, and flowers measure $3\frac{1}{2}$ inches across. Very sweet and a real treasure of beauty and fragrance; will last for days when cut, and perfume the whole house; entirely hardy and an early and abundant bloomer.

Empress "White Wings"—A magnificent variety; large bold flowers, borne erect and considered the finest of the two-colored trumpets.

Grandee—Flowers extra large with broad creamy white petals and magnificent golden yellow trumpets, beautifully crimped and ruffled, exceedingly handsome.

Golden Spur—This is one of the grandest of Daffodils, extra large, bold rich yellow flowers and broad handsome foliage. A strong grower and early bloomer, unsurpassed for garden or house culture.

Princepts—Very early and one of the most popular Winter-flowering varieties; soft sulphur yellow, with immense deep yellow trumpets.

Sir Watkin—The Giant Chalice Flower, or Big Welshman. One of the largest Daffodils grown; immense long-stemmed flowers, sometimes $5\frac{1}{2}$ inches across; rich lemon yellow, large dark cup tinted with orange; grand and handsome.

True Chinese Sacred Lily

THE WATER FAIRY FLOWER OR "SHIN SIN FAR"—OR CHINESE "JOSS FLOWER"

The Great Chinese Sacred Lily is still one of the most popular Winter-blooming bulbs we have. They grow very easily and are sure to bloom quickly; they like moderate moisture and plenty of light and heat. They grow nicely in pots of ordinary soil, but the easiest and quickest way to bloom them is in a bowl of water with a few pebbles to hold the bulbs in place. The bulbs are large, and each one sends up from five to twelve flower stems bearing great clusters of large pure white wax-like blossoms, with yellow centres and deliciously fragrant. Some are single and others double, but all equally beautiful, and they bloom so quickly and abundantly they are in great demand everywhere. They continue to bloom a long time, and by planting at different times, a few weeks apart, you can have flowers all Winter and Spring. Ours are the Genuine Chinese Sacred Lily grown in China.

Price, first size quick-blooming bulbs, 12c. each; 3 for 35c.; \$1.25 per doz. Original baskets containing 30 bulbs, \$2.75; or \$9.00 per 100, delivered free in U. S. A. Or by express, purchasers paying charges, basket of 30 for \$2.00, or \$6.50 per 100.

"CONSIDER THE LILIES"

THE TRUE BERMUDA EASTER LILY

(LILIUM HARRISII)

Bermuda Easter Lily

This is one of the grandest and most beautiful lilies ever seen, and the best of all for Winter flowering in pots; it grows easily and is sure to bloom. The flowers are pure snow-white, very large and fragrant, and borne in splendid clusters, six or eight at a time. Vast numbers of these splendid lilies are grown for church and house decoration every year. Plant in a pot or box which is at least six inches deep and well drained; good turfy soil with a little old, well-rotted manure is best; the bulb should be covered about one inch deep; firm the earth well around it, water thoroughly and set away in a cool place three weeks or more till the roots begin to start, then bring to the light—the window of an ordinary living room is about right. They require moderate heat with plenty of sunshine and water, and should bloom about three months from time of planting. Our Easter Lily Bulbs are of the very best quality and warranted to give satisfaction. We offer them in three sizes. *Ready in August.*

Ornamental Ferns

"WHITMANII"—Finest One Yet

and undoubtedly the most popular. Rather dwarf in growth, but graceful, very compact, dense and feathery. Each frond or branch has a double row of perfect little fronds set at right angles to the midrib, and so thick they seem almost crowded. It is a healthy, vigorous grower, constantly unfolding fresh fronds of light green that contrast exquisitely with the deep green of the older fronds. It is somewhat like the fern shown in the illustration opposite, but decidedly more fluffy, more delicate and beautiful (see outline drawing No. 1). Price, 25c. each, postpaid. Larger size, 75c., express.

NEW FILMY FERN

This splendid new fern comes from England, where it captured a first-class certificate, both from the Royal Horticultural Society and the Royal Botanic Society of London. It makes a strong compact growth with bold heavy foliage. The fronds are distinctly tripinnate or three times divided. The effect is altogether very impressive, and we believe this variety is destined to become very popular. Price, strong plants, 35c. and 60c. each, postpaid.

THE BOSTON FERN

AUTUMN IS AN EXCELLENT TIME FOR SEEDING DOWN NEW LAWNS OR RENOVATING OLD ONES.

Use C. & J. Velvet Green Lawn Grass Seed.

OUR VELVET GREEN LAWN GRASS SEED is not excelled by any for producing a smooth, even, velvety-green sward that will withstand drought and hard usage, and always make a handsome appearance. In seeding down a lawn or grass plot, three things are necessary to insure success : First, to prepare the ground so as to have a fine, smooth seedbed ; second, to put on plenty of seed ; never less, but rather more, than the directions call for ; third, to start the lawn-mower as soon as the weeds (which are always in the ground and sure to start first) are tall enough to catch the machine, and keep them mowed off close till the grass has time to start and become well established. The seed should be lightly raked in and finished with a roller. Apply any good commercial fertilizer as a top dressing when needed. One quart of seed is enough for three hundred square feet (fifteen by twenty feet), or at the rate of five bushels to the acre. Lawns should be kept neatly mowed, which induces a clean, even growth of fresh, lively green.

Price by mail, postpaid 25 cts. per quart; two quarts for 45 cts.; in bulk, purchaser paying express charges, \$1.50 per peck; \$5.00 per bushel of 20 lbs.
